

How to log in to Zoom using the Single Sign On (SSO) option in the Windows Zoom App.

The Zoom SSO option allows you to sign in to Zoom using your OSU Email address and password. This is a great way to sign in to Zoom meetings that require you to be a registered user.

1. Open the Zoom app installed on your computer from the Windows Start menu. If you do not have Zoom currently installed, you can install it from [here](#).
2. Select the Sign In with SSO option on the right side of the zoom application.
3. Type dasnr into the company domain box and click the Continue button.
4. Enter your OSU (OKEY) email address and password into the fields and click the Login button. If required complete the sign in process by authorizing the login with the Duo security app.

If this process does not work, please try signing into the dasnr.zoom.us website. If this also does not work, please contact your DASNR IT support specialist for assistance.
